

# Anti-Aging Micro Needle Pen

## What is Skin Micro-Needling and what are the benefits?

Simply put, it is making tiny micro-sized punctures on the very top of the skin known as the Epidermis layer.

Often known as CIT, (Collagen Induction Therapy), due to the increase of Collagen that your body produces at the area where the micro sized needles have been applied.

**The benefits** are numerous such as; instant improvement in appearance, decrease of pore sizes, reduction of acne scarring, fine lines, wrinkles and a general youthful feel to the skin.

## What areas of the body can I treat?

The Anti-Aging Micro Needle Pen can be used on all parts of the body, face, neck, décolleté, arms, hands, legs, abdomen and back.

## How is the procedure done?

A sterile needle-tip containing 12 tiny micro-needles is attached to the Anti-Aging Micro Needle Pen. Your skincare professional will apply a thin layer of topical gel to your skin and select the appropriate treatment depth based on your unique needs. Next, in a single motion, the pen will be gently pressed against the skin while simultaneously gliding in one direction until the entire treatment area has been covered.

## What does it feel like?

The feeling associated with the Anti-Aging Micro Needle Pen is similar to tiny pin pricks being moved across the skin. While some areas are more sensitive than others, the speed of the reciprocating needle tip makes the treatment comfortable and many clinics do not even apply numbing gel beforehand.

## How long does the procedure take?

The procedure takes 15-30 minutes depending on the size of the area treated.

## What is the downtime?

Immediately after the treatment you will notice a redness to the skin similar to a light sunburn. The total healing time depends on the depth of needles used and the number of overlapping passes your skincare professional performs. On average, patients are red for 1-2 days. Some patients heal completely in 24 hours. Utilizing the Dermanomics Facial Serum post treatment will speed up the healing process.

## When will I see the results?

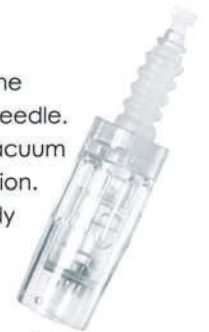

Patients notice an immediate effect on their skin when combined with the Face Serum immediately after treatment. Visible changes to the skin develop over the course of several days. Results continue to improve up to 2-3 months after the treatment as collagen production continues.

## How many treatments will I need?

It is recommended for most patients to receive a series of 2-3 treatments spaced about 4-6 weeks apart. For patients with deep wrinkles, advanced photo-aging, stretch marks or acne scars it is recommended to receive 6-8 sessions at 3-4 week intervals.

## Are the needles safe?

Yes the special feature of this device is the advanced disposable Vacuum Safety Needle. This needle is unique because it has a vacuum chamber that stops all cross contamination. Other disposable needles can draw body fluids into the pen chamber and cross contaminate with other patients. This Vacuum Safety Needle is specifically designed to stop any air flow into the pen chamber making this disposable needle and pen the safest micro pen in the market.

## My clients are saying:

*"What a difference it made in 48 hours" I combined the Face Serum with the Anti-Aging Pen and my clients are calling me to re-book for another treatment.*
